AGRICULTURE

The Dorobo began to cultivate in a small way about 30 years ago (or even a little earlier) and at first they grew only eleusine. Though their inclinations were to become cattle-owners, conditions were unfavourable to the development of cattle-breeding as a primary activity and they have been forced to make agriculture a serious business; for the methods, implements, and even the seed used in this, they have been indebted to the Nandi.

Land

Those who live in A and B domicile categories (with whom alone we are concerned here) cultivate small plots in the open land which surrounds the forest. They have no rights of tenure, except the temporary ones acquired, according to Kenya law, if they live there as squatters under the Resident Native Labourers Ordinance. Their plots, *imbaret*, pl. *imbarenik*, range in size from one acre divided into four individual holdings, to half an acre divided into four holdings; in other cases, plots of a quarter to one-fifth of an acre worked by one person. All plots are fenced, and sometimes a living-hut is built inside the fenced area; occasionally it was found that elderly Dorobo were allowed by Nandi squatters to have a little piece of their cultivated land to work.

European farmers in the district, with whom the Dorobo land question was discussed, seemed not unwilling to let the Dorobo live unmolested on their land provided they gave no trouble; but the government authorities thought otherwise, and the position of a Dorobo who did not choose to become a squatter in order to live on what he considered his own land was thus precarious.

Cultivation Methods and Crops

Two main crops are grown, eleusine, *paiek*, and maize, *ipandek*. Millet had not been grown by 1940, though they bought it from the Nandi. Sweet potatoes, *ropoonik*, are sometimes grown in very limited quantities. Implements are the heart-shaped hoe and the panga or cutlass, both obtained from the Nandi. They have also small axes, *adolut*, and knives, *rotuet* or *cambolust*.

The growing of crops is regulated by the dry and wet seasons, *muainonik*, from October to March, and *inotet*, from April to September. The land is prepared between January and April, and planted in April or May according to the rain. Cultivation follows the Nandi method, with paring and burning of new land. The seed of eleusine and maize is bought from the Nandi, usually from squatters living nearby. Maize and eleusine are planted together in the same plot, though potatoes are generally grown separately. Eleusine is reaped in the Nandi manner by cutting off the heads; maize is picked by hand. Granaries of Nandi type are sometimes made, but are seldom needed, as the yields are so small that the loft of a hut can generally hold all that is not eaten on the field (as is often the case with maize). Cereals are roughly ground on slabs of granite in the Nandi manner.

Food

Food in the old days consisted mainly of meat supplemented by honey, wild vegetables, and grain bought by exchange from the Nandi. The food supply is now based on their own agricultural produce, supplemented by milk when they have any, and by certain other foods when they can be got. Meat is still obtained by trapping, though seldom by hunting; it includes the flesh of antelopes, monkeys, pigs, and leopards. Honey is got, as already described, from honey-barrels. Wild food, collected in the forest, includes fruit of the *momoniat* (*rubus rigidus*), *lemeiyuet* (*ximenia americana*), and *sasuriet* (*musa ensete*, wild banana), the sap of the *sasuriet*, and leaves of nettle, *siuot*.

Intoxicating drink is of two kinds: the Dorobo honey-wine, *kiphelinik* or *kumik ap lo*, made from honey, and fermented with the long seed-pods of the "sausage
